Underpayments by Payment Ratio Band

NORTHSTAR DATA QUALITY — INVESTIGATION FINDINGS

Key findings, business impact and recommended actions

KEY FINDINGS

Payment reconciliation

3,985 of 39,999 completed payments (9.96%) did not reconcile with calculated order values, representing **£5.19M in underpayment variance**. No material overpayments were identified.

Where the issue occurs

3,769 payment mismatches (94.6%) were associated with orders marked as Completed, indicating that order status alone does not provide assurance of successful revenue reconciliation.

Payment pattern

3,113 mismatches (78.1%) involved payments covering between 25% and 75% of the calculated order value. However, no single payment ratio explains the issue.

CRM data quality

373 order IDs were duplicated in the CRM export. Among Closed Won records, 356 orders were affected, resulting in **£1.08M of duplicated reported deal value**.

Discount investigation

Underpayment rates were similar for discounted (10.08%) and non-discounted orders (9.82%), providing no evidence that discounting is the primary driver of the mismatch.

BUSINESS IMPACT

£5.19M

Underpayment variance identified across completed payments

£1.08M

Duplicated Closed Won CRM value

3,985

Completed payments requiring reconciliation

RECOMMENDED ACTIONS

- **01 - Strengthen payment reconciliation controls**

Introduce automated checks between calculated order value and completed payment value, with exceptions flagged for investigation.

- **02 - Investigate upstream payment-processing logic**

Review how payment amounts are generated, transformed and transferred between operational systems.

- **03 - Introduce CRM duplicate validation**

Detect duplicate order IDs before Closed Won deal values are included in revenue reporting.

- **04 - Review completed orders with incomplete payment coverage**

A Completed order status should not be treated as confirmation that the expected payment value has been received.

- **05 - Continue root-cause investigation**

The available data identifies the scale, financial impact and patterns of the issue, but does not support a single definitive root cause.
